

WASHINGTON, USA

Microsoft commitments

CARBON

Microsoft pledged to become carbon negative by 2030 and remove historical carbon since its 1975 founding by 2050. Microsoft will reduce Scope 1 and 2 emissions to near zero through energy efficiency work and by reaching **100 percent renewable energy supply by 2025.**

Microsoft has also committed by 2030 to:

- Be free of diesel
- Match 100 percent of electricity consumption, 100 percent of the time, with zero-carbon energy purchases
- Reduce our Scope 3 emissions by more than half

WATER

In 2020, Microsoft pledged to be water positive for our direct operations by 2030.

Through this commitment, we will replenish the water consumed by datacenter operations in water-stressed regions. We have also committed to **reduce water waste by 95 percent in our datacenter operations by 2024.**

WASTE

In 2020, Microsoft announced enhanced goals for waste reduction, circular supply chains, and zero-waste certification. We are working towards our goal of **90 percent reuse of servers and components by 2025** through our first-of-a-kind Microsoft Circular Centers.

Microsoft is using **circular economy** principles in our datacenters by implementing reuse and comprehensive recycling programs.

By 2030, Microsoft datacenters will be zero waste

ECOSYSTEMS

Microsoft has committed to **protecting more land than we use for direct operations by 2025.**

Microsoft is committed to community investment, pollution remediation, and fair economic inclusion initiatives, as well as investment in clean energy, broadband access, and water replenishment initiatives.

Washington, USA

As more people and businesses rely upon technology to stay connected, informed, and productive, digital needs in Quincy and around the globe are growing—and that means the need for datacenters is growing, too.

The Microsoft Cloud offers customers an energy-efficient and carbon-neutral alternative to running their own private datacenters. [Research](#) shows that Microsoft Cloud services can be up to 93 percent more energy efficient than traditional enterprise datacenters.

We're committed to providing a sustainable Microsoft Cloud, so we wanted to share information about how we take responsibility for our datacenter operations.

For Microsoft datacenters located in Washington, in the West US 2 region, we have included local sustainability investments and datapoints in support of meeting and exceeding our commitments around carbon, water, waste, and ecosystems.

Published April 2023. This document shares information we have as of the publication date, and it includes estimated information and projections. The information is provided as-is and may change without notice.

Local sustainability investments

CARBON

1.156

Power usage effectiveness (PUE)

January 2022 – December 2022
Design PUE for new datacenters 1.12

47%

Renewable energy coverage from wind, solar, and hydro power

Approximate energy procured through June 2022

In Washington, we are transitioning from petroleum-based diesel to power our backup generators to a **renewable biofuel blend that reduces net carbon emissions**.

The Microsoft datacenters in Quincy are **LEED Gold certified**.

[Learn about PUE](#)

WATER

1.09 $\frac{\text{L}}{\text{kWh}}$

Water usage effectiveness (WUE)

January 2021–December 2021

Microsoft uses **adiabatic cooling** at several of our Washington datacenters.

These datacenters use outside air and zero water when temperatures are below 29.4 degrees Celsius, **reducing cooling water use to less than 5 percent of the year**.

[Learn about WUE](#)

WASTE

Microsoft Circular Centers can process up to

12,000

servers per month for reuse.

In February 2023, we **opened a Microsoft Circular Center at the Quincy datacenter facilities**.

In 2022, Microsoft datacenters in Washington and other locations **renewed zero-waste certification through the UL's Zero Waste to Landfill program**.

COMMUNITY

On June 30, 2021, Microsoft contributed:

\$31M

to encourage the most efficient use of industrial water resources toward a water reuse facility in Quincy, Washington on its grand opening.

This treatment facility—the **first of its kind in Washington state** and more than 10 years in the making—will process cooling water for reuse by local industries, including datacenters. This will create a closed-loop system so wastewater isn't discharged to the environment as well as **decreased need for the potable well water required for datacenter cooling**.

Achieving your sustainability goals

Microsoft Azure enables operational agility, performance, efficiency, and sustainability so you can reduce your company's water usage, waste output, and carbon footprint—all while improving productivity and cost efficiency.

Microsoft Emissions Impact Dashboard

The Microsoft Emissions Impact Dashboard helps to quantify the impact of Microsoft Cloud services on your environmental footprint, factoring in Microsoft's Scope 1, 2, and 3 emissions as well as the efficiency of your on-premises environments.

Microsoft Cloud for Sustainability

The Microsoft Cloud for Sustainability allows you to more easily and effectively record, report, and reduce your emissions on a path to net zero. It integrates previously disparate solutions into a new system of record that delivers all the data you need to manage your business today while you transform.
